IMPORTANT NOTICE

Compatibility of Installation Sealants with FENZI IG System

We are aware that installers may be utilizing various sealants to fix supporting components in place, such as setting / glazing blocks and / or location blocks during the installation of insulating glass units.

It is important that if sealants are to be used for this application, that they are tested for chemical compatibility with the insulating glass unit sealants that they may come into contact with (even if this contact is indirect or through another medium such as a setting block).

The use of incompatible sealants can result in discolouration of the sealants and / or hardening of the IG sealants, which can lead to premature failure of the insulating glass unit's hermetic seal.

If sealants are to be used to fix components in place, we recommend using products that have been tested and verified to meet compatibility with the Fenzi IG sealants.

Our list of available, tested, and compliant products is below;

1. **DOWSIL™ 580 Glass, Metal and Masonry Sealant**
White / Black / Grey / Translucent
2. **DOWSIL™ 688 Glazing and Cladding Sealant**
White / Black / Grey
3. **DOWSIL™ 795 Silicone Building Sealant**
White / Black / Grey
4. **DOWSIL™ 791 Silicone Weatherproofing Sealant**
White / Black / Grey
5. **DOWSIL™ 121 Structural Glazing Sealant**
Black
